

[Re] Waste

**Your Plastic**  
**Our Purpose**

At [Re] Waste, we reinvent retail experiences by transforming reclaimed plastics into statement-making displays. Proudly Canadian, our 100% recycled sheet goods bring sustainability to the forefront of design, combining durability with endless customization possibilities.

Partnering with visionary interior designers and business owners, we create spaces that resonate with purpose. Join us in crafting retail environments that stand for a greener future.

The minimalist form factor of the [Re] Waste Cube modular display system is ideal for pop-up shops. Featuring a flat pack design with quick assembly, the cubes are available in a variety of sizes.

[Re] Waste cubes can be stacked together to form different heights of display. The modular system can be easily re-arranged on-site offering flexibility to adapt on the fly. Options for integrated lighting in the pedestal, shelving, and floating shelf systems further emphasizes the product displayed. Choose a standard color, pick a custom color, or specify with pattern or texture to drive home an immersive brand experience.

# Custom textures for unique spaces

Patterns and texture make for an immersive tactile and visual experience. [Re] Waste's recycled plastic sheets offer a symphony of surfaces curated to your specifications. From sleek and smooth to richly textured, each designed to captivate and connect with customers.

Our commitment to consistency means the integrity of color persists throughout the sheet, ensuring visual continuity no matter how deep the custom pattern. In collaboration with designers, we sculpt textures that embody brand identity with eco-conscious elegance.

# Embrace brand through color

Color is more than a hue; it embodies a brand's spirit and acts as an innate identifier. Our standard palette—crisp white, deep black, vibrant yellow, bold red, and classic blue—provides a vivid spectrum to define your space. But for those who dream in color, we offer custom shades with the precision of the Pantone® matching system, translating vision to reality.

Our sheets, available in thicknesses from 1/8" to 1/2", accommodate diverse design needs. With a minimum order commitment you can embrace brand identity with a signature color that speaks to a sustainable journey.

The Curve [Re] Waste display system makes a statement in any modern retail space. Designed to align with current aesthetic trends towards curves and arches, the pieces create an undulating space that customers will remember. Define the vibe through custom colors. Choose pastel pink for bright and uplifting or hunter green for a more serious tone, with the right color these displays work across a variety of brands and industries.

The elements of the Curve display system can be assembled to form shelving, clothing racks, wall panels for mirrors or signage, pedestals and much more. Paired with wooden shelving elements and metal hardware, the displays embody sophisticated elegance through contemporary design.

**Make the best for the  
most for the least.**

Charles Eames

Collaborate with our in-house design team to create a unique shopping experience with custom designed central displays, reception desks, signage, sculptural elements, and much more. All created using recycled materials and built using sustainable manufacturing methods.

Custom Popsicle benches manufactured using [Re] Waste recycled sheets. This sculptural seating provides a memorable and photo-friendly place to relax while diverting 150 lbs of plastic away from landfills in the process.

# Design beyond sustainability

Our purpose transcends recycling; we transform plastic waste into a canvas of opportunity. From expertly crafted materials, contemporary display systems, and custom design services, we work with businesses to create memorable retail experiences while paving the way to a more sustainable future.

By working with [Re] Waste, brands align with a movement that is redefining the norms of industry and environmental stewardship. At [Re] Waste, we provide not just resources and unique spaces, but a way of building that is better for the planet.

# [Re] Waste

Our mission is bold yet simple: To create the largest circular economy network in the world. We are going to get there by offering every business the opportunity to recycle their plastic and level up their retail spaces in the process.

Let's work together to create a greener, more inclusive world - one recycled plastic sheet at a time.
